TITLE

Sierra Leone Annual Agricultural Survey 2023

ABBREVIATION OR ACRONYM

SLAAS 2023

COUNTRY

Name	Country code
Sierra Leone	SLE

STUDY TYPE

Agriculture Integrated Survey[hh/nhh/agris]

SERIES INFORMATION

The 2023 Sierra Leone Annual Agricultural Survey (AAS) is the first round of AAS conducted in Sierra Leone. It was implemented under the 50x2030 Initiative, a program jointly launched by the World Bank, Food and Agriculture Organization of the United Nations (FAO) and International Fund for Agricultural Development (IFAD). The lead national implementing agencies in Sierra Leone are Statistics Sierra Leone (Stats SL) and the Ministry of Agriculture and Food Security (MAFS).

AAS was designed to ensure the production of foundational agricultural data that are timely and of quality, fit the needs of the country and match the main national development targets. The approach adopted is that of a modular approach. This first round cover the CORE module and the ILP (Income, Labor and Productivity) module.

ABSTRACT

The Sierra Leone Annual Agricultural Survey (SLAASS 2023) is a key component of Stats SL's efforts to provide up-to-date information on the agricultural sector. The 2023 SLAASS builds upon the successes of previous surveys and aligns with international best practices.

The primary objective of the SLAASS was to collect comprehensive data on crop and livestock production, as well as other relevant agricultural indicators. This information is essential for policymakers, researchers, and other stakeholders to assess the performance of the agricultural sector, identify opportunities for improvement, and inform evidence-based interventions. Specifically, it involved:

- collection of timely data on agricultural production and productivity at both national, regional and district levels;
- gathering core data to help develop and review agricultural policies and to guide the implementation of agricultural plans at national and regional levels between agricultural sub-sectors;
- compilation of fundamental statistics that facilitate comparisons in the development of the agriculture sector across the country.

KIND OF DATA

Sample survey data [ssd]

UNIT OF ANALYSIS

Agricultural households

Version

VERSION DESCRIPTION

v2.3: Updated version of the edited and anonymized dataset files.

The type of release considered is Public Use File (PUF).

VERSION DATE

2025-11-28

VERSION NOTES

This new version of the datasets incorporates revisions to the ID variables. These updates improve the possibility of merging datasets, particularly those from the PP (Post Planting) season. Merging datasets from the PH (Post Harvesting) season, as well as merging PP and PH datasets, may still be restricted due to limitations inherent to the data collection application.

Scope

NOTES

This survey collected data from agricultural households, covering the Post Planting (PP) season and the Post Harvesting (PH) season. The topics covered are: characteristics of agricultural households, agricultural production (crops, livestock, aquaculture, fisheries and forestry), access to inputs/resources, farm income, and labor force.

Coverage

GEOGRAPHIC COVERAGE

National coverage, with the exception of the Western Urban district

UNIVERSE

Households involved in agricultural production and livestock rearing, in all the fifteen (15) agricultural districts of the country, were considered for this study.

Sampling

SAMPLING PROCEDURE

The survey employed a stratified random sampling technique to ensure a representative sample of agricultural households across all five regions and fifteen districts of Sierra Leone with the exception of the Western Urban district. A two-stage sampling method was employed to select households. Both stages of sampling employed probabilistic methods.

The country was divided into districts and within each district, areas called Enumeration Areas (EAs) were identified. A sample of EAs was then selected, followed by a sample of agricultural households (Ag HHs) within each chosen EA. The total number of EAs selected for the survey was 520, with 5,200 households interviewed in all. For each EA, the field team had a list of 10 households.

The survey included households engaged in crop cultivation and/or livestock rearing, regardless of the scale of their operations. However, it did not cover non-household holdings, such as large-scale commercial farms, or sectors like aquaculture, forestry, and fisheries.

Unless specified otherwise in the dataset descriptions, this survey provided estimates at national, regional and district levels.

DEVIATIONS FROM THE SAMPLE DESIGN

Due to operational constraints, not all sampled households were successfully surveyed during data collection. Consequently, the PP phase comprised 4,998 households. Additionally, survey attrition occurred during the PH phase. Weight variables for each phase have been adjusted to account for these variations.

WEIGHTING

Sample weights were calculated for the data files. They were computed as the inverse of the probability of selection of agricultural household, which is the product of the probability of selection of the EA in which the household is located (at the first stage) and the probability of selection of the household (at the second stage).

The weight variable is called "HH_Final_weight".

Data collection

DATES OF DATA COLLECTION

Start	End	Cycle
2023-09-01	2023-09-30	Post Planting (PP)
2023-12-01	2023-12-30	Post Harvesting (PH)

DATA COLLECTION MODE

Computer Assisted Personal Interview [capi]

SUPERVISION

The teams of data collectors were divided into two groups: enumerators, primarily responsible for collecting data from eligible and consenting households, and supervisors, responsible for assigning and assisting enumerators in solving problems that they may encounter during the administration of the survey questionnaire and review each questionnaire before it is submitted.

The number of persons per team varied from district to district. It ranged from 2 to 5, for a total of 104 enumerators and 26 teams deployed in the selected EAs to collect the data.

DATA COLLECTION NOTES

The data of the SLAAS 2023 was collected throughout the annual agricultural period. This period is divided into two seasons: the first season gave rise to the first phase of the data collection, corresponding to the Post Planting (PP) phase, and the second season gave rise to the second phase of the data collection, corresponding to the Post Harvesting (PH) phase.

A training of enumerators was held before each phase. During the training, the questionnaires were presented and tested, and the main roles of each team member were discussed and elaborated.

DATA COLLECTORS

Name	Abbreviation	Affiliation
Statistics Sierra Leone	Stats SL	Government of Sierra Leone
Ministry of Agriculture and Food Security	MAFS	Government of Sierra Leone

Questionnaires

QUESTIONNAIRES

For this survey, two (02) questionnaires were used: the Post Planting (PP) questionnaire and the Post Harvesting (PH) questionnaire.

They were administered in each household, preferably to the head of household. They cover two (02) modules, the CORE module and the ILP (Income, Labor and Productivity) module, splitted into several topics such as household demographics, land ownership, agricultural activities, livestock rearing, labor force composition, and participation in off-farm activities.

The questionnaires are provided as external resources.

Data Processing

DATA EDITING

The PP and PH questionnaire were implemented on CSPRO as CAPI tool. During data collection, some validation controls were integrated into the app to minimize mistakes when typing households' answers. After data collection, a processing program designed under SPSS software permitted to clean both cases and variables. Duplicated cases were deleted and then the sampling weights adjusted to take the two non-covered EAs into account. Missing, illegal, unlike and incoherent values were detected and then locally imputed objectively in respecting filters. Finally, the necessary tabulation variables were created and then tables were produced according to the tabulation plan designed earlier.

METHODOLOGY NOTES

The dataset was anonymized using Statistical disclosure methods on R software. To start the process, variables were classified into main categories as variables to delete, quasi identifiers, direct identifiers, linked variables. All direct identifiers and unnecessary variables were removed. Then, quasi-identifiers (and linked variables) were considered to formulate disclosure scenarios. Disclosure risk was mainly measured using k-anonymity and probabilistic risk.

Quasi identifiers have been anonymized using recoding, shuffling and local suppression which was applied to both the quasi identifiers and the linked variables. In addition, information loss was mainly measured based on number of missing values introduced during anonymization and dependency coefficient between categorical variables.

During the anonymization process, the EA codes have been shuffled. Their final usage is just to identify households in the same primary sampling unit. So, any use of these codes to infer geographic variables could be misleading.

Data Appraisal

ESTIMATES OF SAMPLING ERROR

To appreciate the data quality, some tables were supported by sampling errors estimates. Especially, coefficients of variations and standard errors were estimated for a set of indicators for open data publishing purposes.

Access policy

CONFIDENTIALITY

Confidentiality of respondents is guaranteed by the Statistics Act of Sierra Leone, enacted in 2002.

ACCESS CONDITIONS

The datasets have been anonymized and are available as Public Use Files (PUF). They contain individual-level data (non-aggregated) that has undergone treatment to ensure strict confidentiality, preventing direct or indirect identification of individuals or households. This confidentiality protection aligns with relevant legislation.

S5AQ3: S5AQ3 - What is the total quantity (in kg) of [ITEM] collected in the past 12 months?

Data file: PH_5A_Aquaculture

Overview

Valid: 75 Invalid: 335 Minimum: 0 Maximum: 16384 Mean: 795.797 Standard deviation: 1966.793
 Type: Continuous Decimal: 2 Width: 11 Range: 0 - 16384 Format: Numeric

S5AQ4: S5AQ4 - How much of the [ITEM] collected (in kg) in the past 12 months was consumed by household members?

Data file: PH_5A_Aquaculture

Overview

Valid: 75 Invalid: 335 Minimum: 0 Maximum: 3051.52 Mean: 384.97 Standard deviation: 581.186
 Type: Continuous Decimal: 2 Width: 11 Range: 0 - 3051.52 Format: Numeric

S5AQ5: S5AQ5 - Did your holding sell some of the [ITEM] collected in the past 12 months?

Data file: PH_5A_Aquaculture

Overview

Valid: 75 Invalid: 335 Minimum: 1 Maximum: 2
 Type: Discrete Decimal: 0 Width: 8 Range: 1 - 2 Format: Numeric

2023 SIERRA LEONE ANNUAL AGRICULTURAL SURVEY REPORT

Title	2023 SIERRA LEONE ANNUAL AGRICULTURAL SURVEY REPORT
Author(s)	Statistics Sierra Leone (Stats SL) Ministry of Agriculture and Food Security (MAFS)
Date	2025-01-01
Country	Sierra Leone
Language	English
Contributor(s)	50x2030 Initiative
Publisher(s)	Statistics Sierra Leone (Stats SL)
Description	The report from the 2023 Annual Agricultural Survey presents main findings from the PP and PH collected data.
Abstract	The 2023 Annual Agricultural Survey reveals that there are about 1,256,456 agricultural households (AgHH) in Sierra Leone with a total agricultural population of 6,666,029. The majority of these agricultural households (about 73 percent) are headed by males. In addition, only 3.6% of household members attended formal training in agriculture and 60% percent of the agricultural population can not read and write in any language. Most of agricultural households are small-scale, practicing mainly crop cultivation or livestock rearing. Majors crops harvested in the country are rice, cassava, and cocoa, while the main livestock type raised by holdings is chicken.
